

## **Personal Expense Tracker**

Problem Statement :

1. The user would need to keep track of various streams of expenditure and also keep track of the outflow of money from their accounts.
2. Furthermore, the user would need assistance to efficiently allocate pre-existing funds and pave the way for future savings as well as investments.
3. The email subscription would serve as a reminder when there is excessive spending, thereby prompting the user to make financial decisions accordingly.
4. Additionally, the users would need to receive a detailed analysis, projecting data that summarizes their spending habits, which would in turn help them budget better in the future.
